

Global e-identity™ First Patent Published

Multimodal Biometric and Digital Identity Patent Published within 209 Days from Filing

Wilmington — Global e-identity's™, first patent was published September 27th, 2018

The United States Patent Office has published patent application number US20180278606 A1 – unveiling Global e-identity's™ patent pending technology to the world. This patent is directly relevant to multimodal biometrics and digital identity.

“Our patent covers a non-evasive way of validating identity and solves today’s problems that biometric providers using finger print, iris or face identification technology such as Apple’s Face ID have not solved” said Robert Adams, Founder of Global e-identity’s™ “We have discovered an old but new and unique way using Ultra sound/Light to non-invasively authenticate an individual’s identity in a manner that will provide a secure foundation for all types of digital identity for the coming millennium while respecting the individual’s privacy”, he said.

Global e-identity™ is a rapidly moving leader in the field of multimodal biometrics to both increase accuracy of authentication and greatly reduce hacker’s ability to spoof identity.
